

PHP *Fundamental*

Berkenalan dengan PHP

PHP

- PHP – PHP: Hypertext Preprocessor
- Rasmus Lerdorf
- Open Source
- Server Side Script
- <http://www.php.net>

Zend

- Zend (Zeev Suraski, Andi Gutmans)
- <http://www.zend.com>

Kelebihan PHP

- File Upload
- HTTP Cookie
- Akses Database
- HTTP Authentification
- Regular Expression
- Akses File
- Error Handling
- Membuat file PDF
- Socket Programming

Web Server

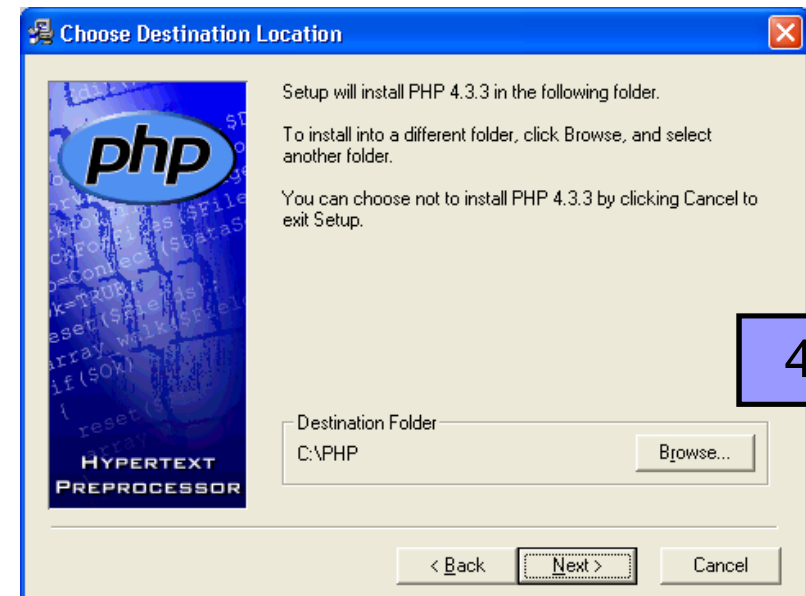

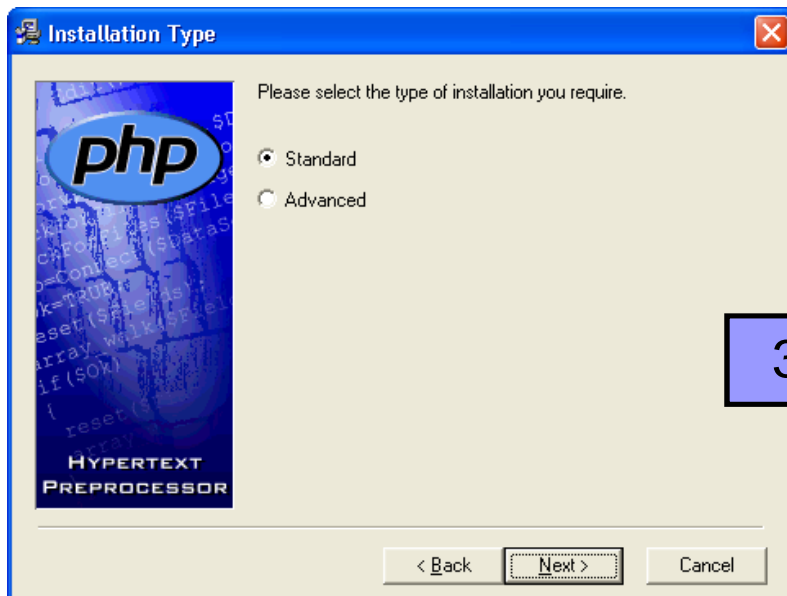

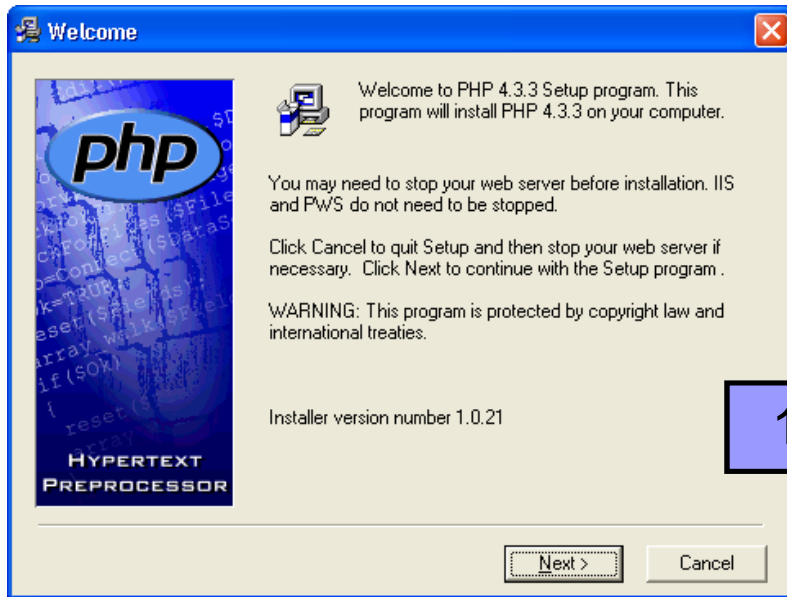

- Apache (<http://www.apache.org>)
- IIS – Internet Information System
- BadBlue

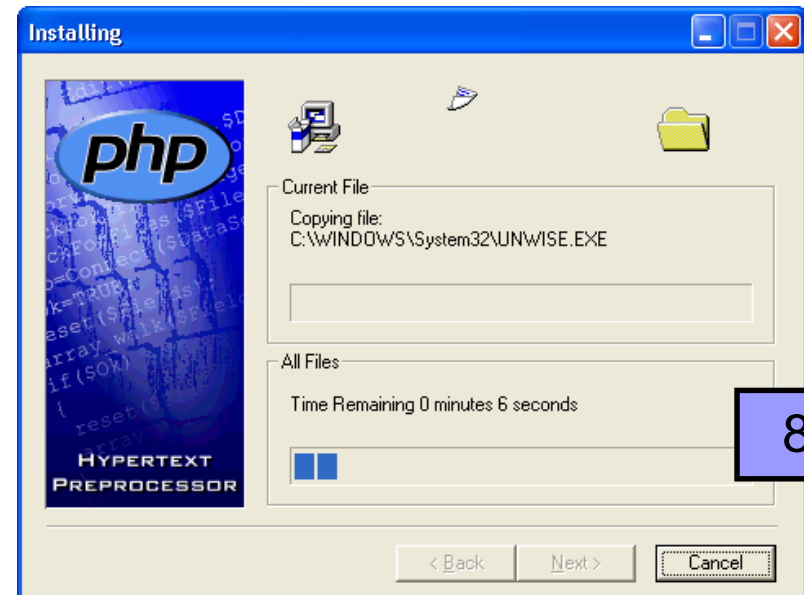

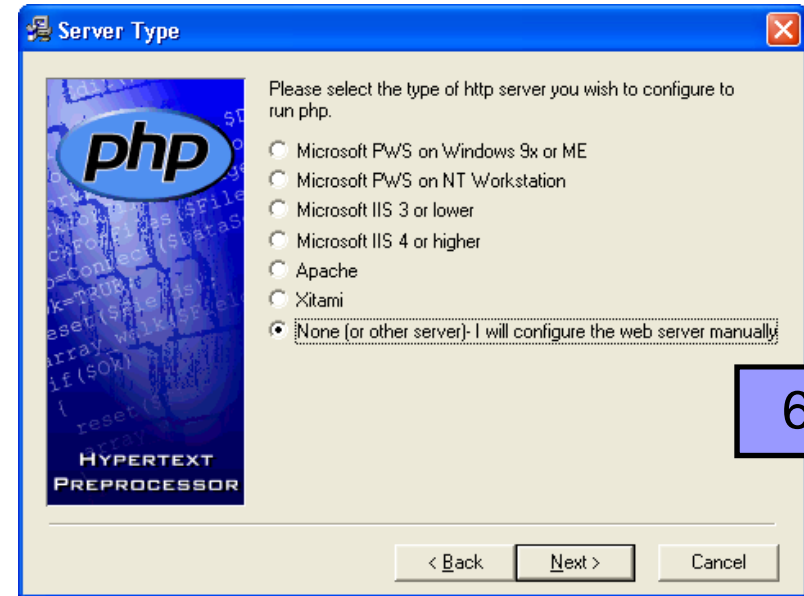

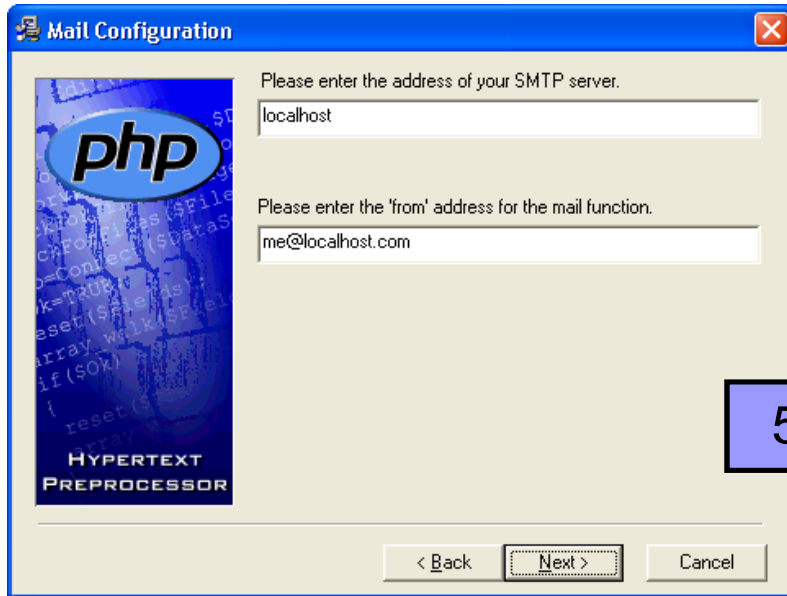

Web Browser

- IE – Internet Explorer
- Mozilla Firefox
- Konqueror
- Safari

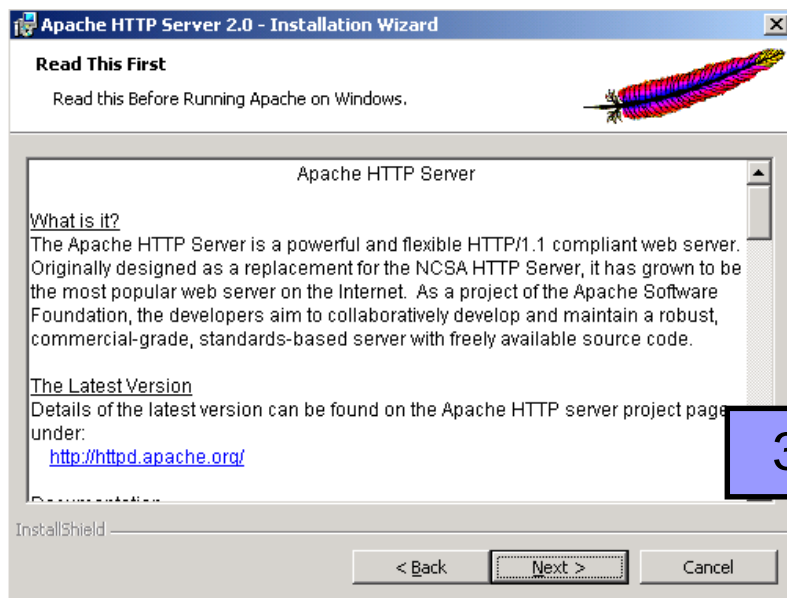

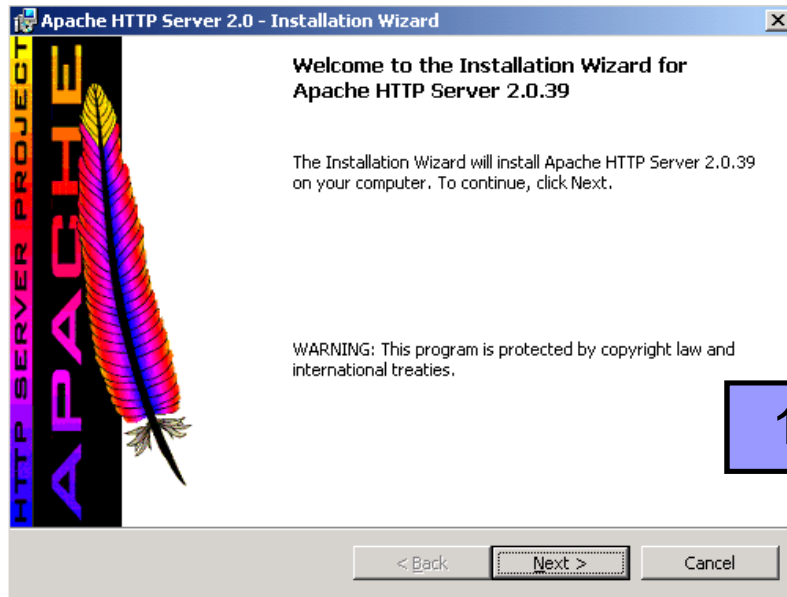

Editor

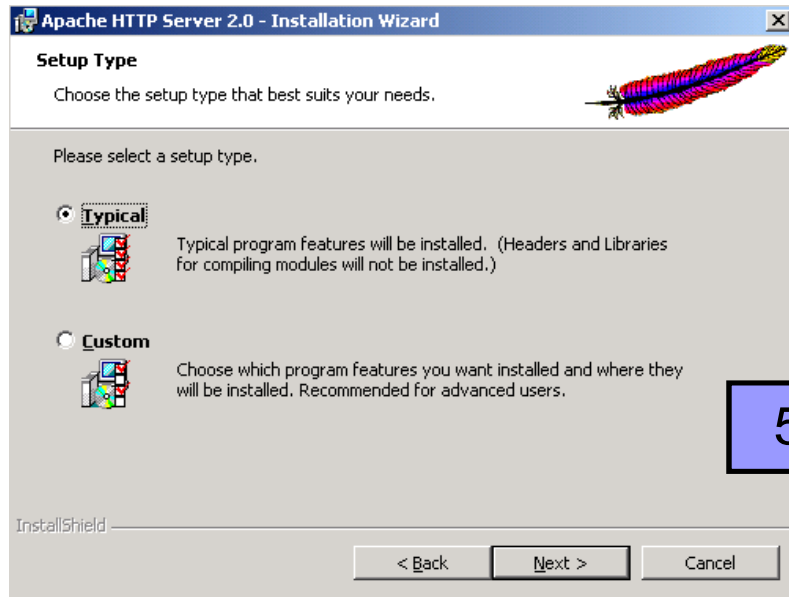

- Macromedia Dreamweaver, Front Page
- Notepad, Editplus, Kate, Kwrite

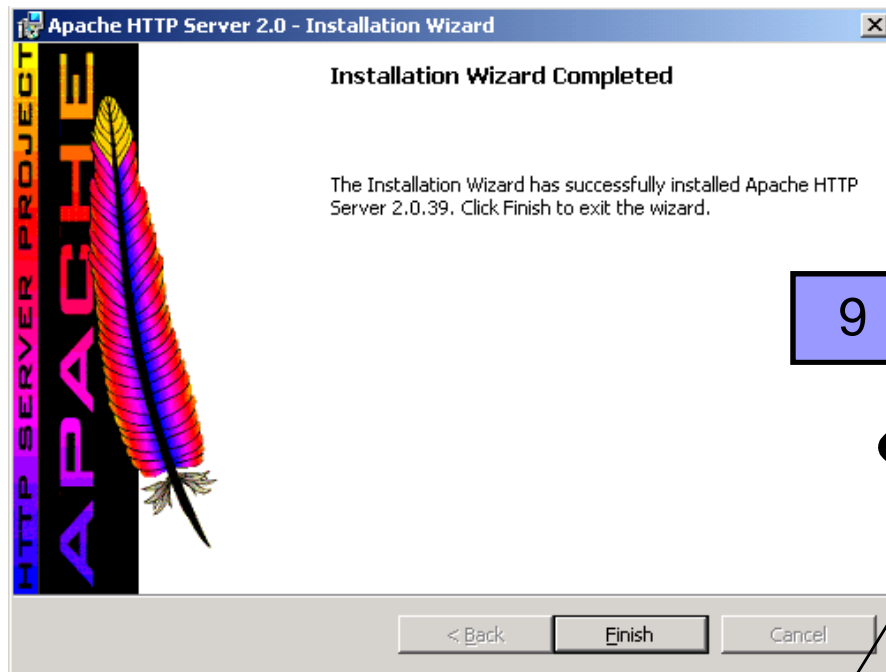

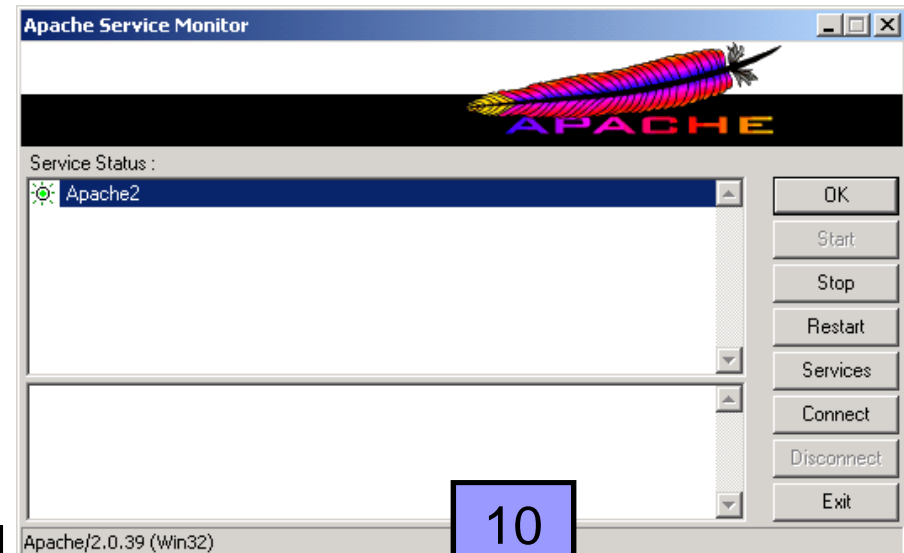

Instalasi Apache

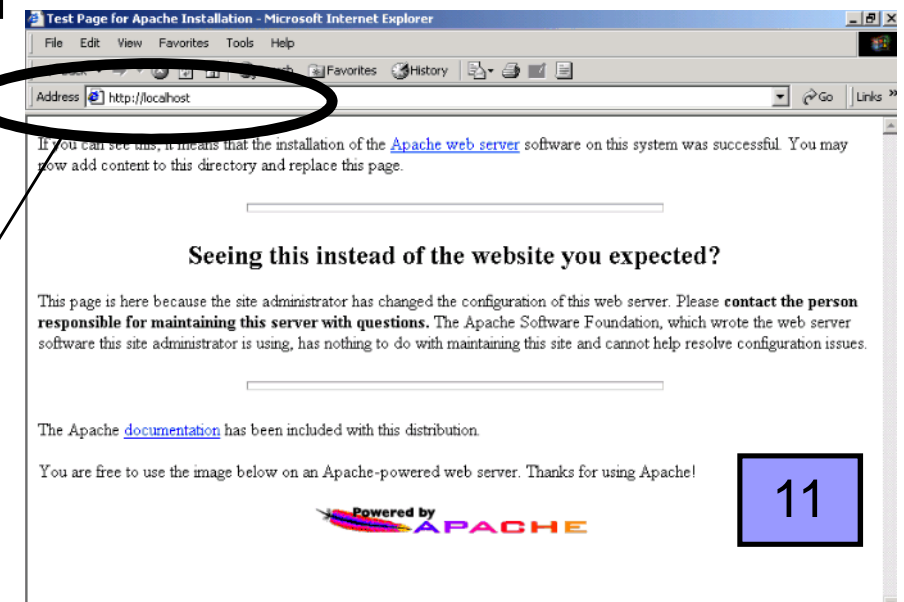

9

10

11

http://localhost

Klik:

Start > Programs > Apache HTTP Server 2.0.39 > Configure Apache Server > Edit the httpd.conf

DocumentRoot

```
#  
# DocumentRoot: The directory out of which you will serve your  
# documents. By default, all requests are taken from this directory, but  
# symbolic links and aliases may be used to point to other locations.  
#  
DocumentRoot "C:/Program Files/Apache Group/Apache2/htdocs"
```

DirectoryIndex

```
DirectoryIndex index.php index.htm index.html index.html.var
```

ScriptAlias

```
ScriptAlias /php4/ "c:/php/"  
Action application/x-httpd-php4 "/php4/php.exe"  
AddType application/x-httpd-php4 .php  
AddType application/x-httpd-php4 .php3
```

Klik:

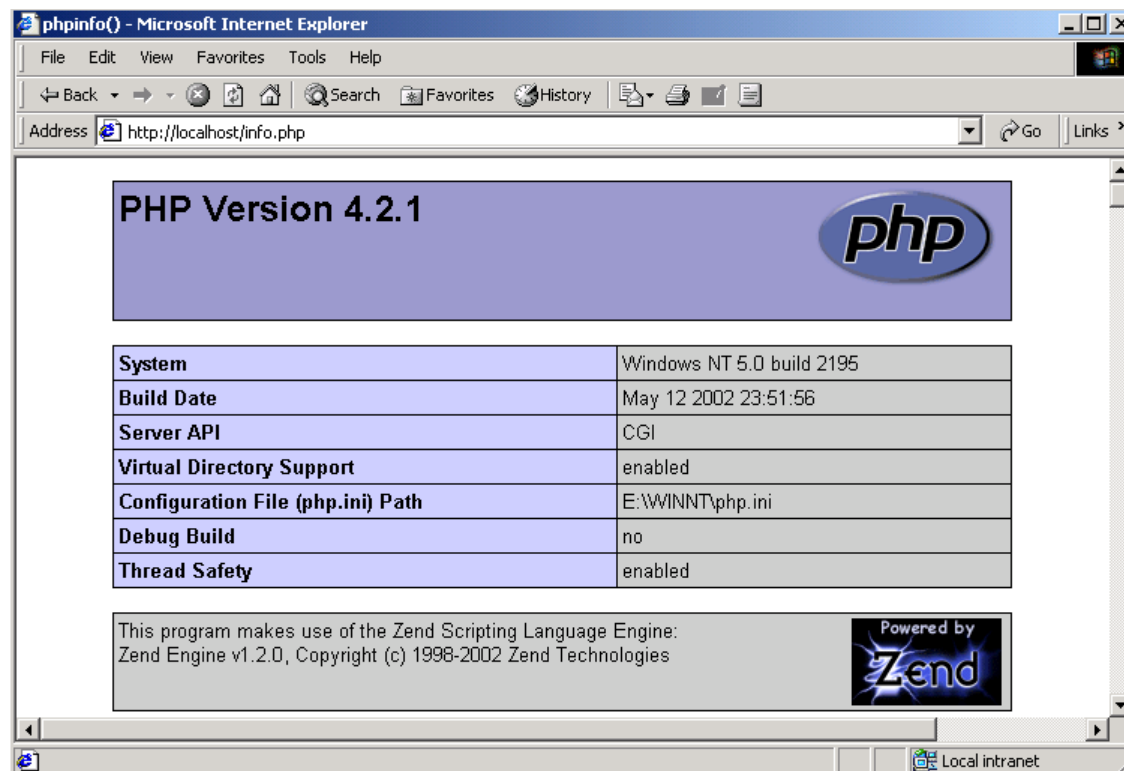

Start > Programs > Apache HTTP Server 2.0.39 > Control Apache Server > Restart

Tag PHP

- `<?php`
 `statement_php;`
 `?>`
- `<?`
 `statement_php;`
 `?>`
- `<script language="php">`
 `statement_php;`
 `</script>`
- `<%`
 `statement_php;`
 `%>`

info.php

```
<?php
    phpinfo();
?>
```

Tampilan info.php

Komentar

- # statement_php;
- // statement_php;
- /*
 statement_php;
*/

komentar.php

```
<?php
# echo "Hello";           komentar untuk 1 baris
// echo "Hello";         juga komentar untuk 1 baris

/* echo "hello";          nah yang ini untuk lebih
   echo "hello juga";     dari 1 baris komentar
*/

?>
```

Variabel

- Digunakan untuk menyimpan informasi
- Diawali oleh tanda \$ diikuti oleh nama variabel
- Panjangnya tidak terbatas
- Setelah tanda \$, diawali oleh huruf / garis bawah
- Case sensitive
- Tidak boleh ada spasi

variabel.php

```
<?php
    $nama="Rizky Tahara Shita";
    $angka="28";
    echo $nama."$angka";
?>
```

Tipe Data

- Integer
- Float
- String
- Array
- Object

tax.php

```
<?php
$gaji=1000000;
$pajak=0.1;
$thp=$gaji-($gaji*$pajak);
echo "Gaji sebelum pajak = Rp. $gaji <br>";
echo "Gaji yang dibawa pulang = Rp. $thp";
?>
```

■ Integer (bilangan bulat)

```
<?php
    $a = 1234; # decimal number
    $a = -123; # a negative number
    $a = 0123; # octal number (equivalent to 83 decimal)
    $a = 0x1A; # hexadecimal number (equivalent to 26 decimal)
?>
```

■ Float (bilangan pecahan)

```
<?php
    $a = 1.234;
    $a = 1.2e3;
    $a = 7E-10;
?>
```

■ String

```
<?php
    $var = "tahara";           #variabel $var bertipe string
    echo "nama saya $var";     #menghasilkan output: nama saya tahara
    echo 'nama saya $var';     #menghasilkan output: nama saya $var
?>
```

□ Escaped Characters

Sequences	Arti
\n	Newline (baris baru)
\r	Carriage return
\t	Horizontal tab
\\	Backslash
\\$	Tanda dollar
\"	Tanda kutip ganda
\'	Tanda kutip tunggal

```
<?php
    echo 'Hari ini hari jum\'at';
?>
```

■ Array

```
<?php
    $a[0]="IndexKe0";           #$a merupakan array skalar
    $b["ke0"]=7;               #$b merupakan array assosiatif
    $a[]="IndexKe1";           #$a[1]="IndexKe1"

    echo "Nilai a[0]=$a[0]<br>
        Nilai b[\"ke0\"]=\".$b[\"ke0\"]\".<br>
        Nilai a[1]=$a[1]";

    $c[1][0]="Array2Dimensi";   #array 2 dimensi

    echo "Nilai c[1][0]=$c[1][0]";

    $d[0][0][0][0]=0;          #array 4 dimensi

    #
    #mengisi array dengan menggunakan fungsi array()
    #
    $a["name"]="melon";
    $a["taste"]="sweet";
    echo $a["taste"]." ".$a["name"];
```

■ Array (lanjutan)

#hal ini akan sama jika Anda menuliskannya sebagai berikut:

```
$a=array(  
    "name" => "melon",  
    "taste" => "sweet"  
);  
echo $a["taste"]." ".$a["name"];
```

```
#  
#mengisi array multidimensi dengan fungsi array()  
#  
$a=array(  
    "melon" => array("taste" => "sweet"),  
    "apple" => array("taste" => "not sweet")  
);  
echo $a["apple"]["taste"];
```

#output: not sweet

?>

■ Object

```
<?php
    class foo
    {
        function do_foo()
        {
            echo "Doing foo.";
        }
    }
    $bar = new foo;
    $bar->do_foo();
?>
```

Konstanta

define("variabel", "nilai");

```
<?php
    define("pi", "3.14");
    $jari_jari=10;
    $luas_ling=pi*$jari_jari*$jari_jari;
    echo "Jari-jari Lingkaran = $jari_jari<br>Luas Lingkaran =$luas_ling";
?>
```

Fungsi isset(), unset(), empty()

- isset(), digunakan untuk memeriksa apakah sebuah variabel sudah dicreate/belum, akan menghasilkan nilai 1 jika benar dan tidak mengembalikan apa-apa jika salah.
- unset(), digunakan untuk menghapus sebuah variabel beserta isinya.
- empty(), digunakan untuk memeriksa sebuah variabel, akan menghasilkan nilai 1 jika variabel tidak ada / variabel=0 atau "" dan tidak mengembalikan apa-apa jika variabel tsb ada.

sets.php

```
<?php
    $x=5;
    $email="rizky.tahara@gmail.com";
    echo "Isi variabel x= $x <br>";
    unset($x);
    echo "Isi variabel x setelah unset = $x <br>";

    echo "Email = " .empty($email). "<br>";
    echo "Website = " .empty($url);
?>
```

Operator

- Aritmatika
 - Untuk perhitungan matematika
- Bitwise
 - Untuk membandingkan operan sebagai bilangan biner (0 atau 1)
- Pembanding
 - Untuk mengembalikan nilai dalam bentuk true atau false
- Penambahan/Pengurangan terstruktur
 - Untuk penambahan/pengurangan secara teratur
- Logika
 - Untuk melakukan perbandingan logic

■ Aritmatika

Operator	Operasi	Contoh
+	Penjumlahan	$\$a + \b
-	Pengurangan	$\$a - \b
*	Perkalian	$\$a * \b
/	Pembagian	$\$a / \b
%	Modulus (siswa pembagian)	$\$a \% \b

■ Bitwise

Operator	Operasi	Contoh
&	And	$\$a \& \b
	Or	$\$a \b
^	XOR	$\$a \wedge \b
~	Not	$\sim \$a$
<<	Geser bit ke kiri	$\$a << \b
>>	Geser bit ke kanan	$\$a >> \b

■ Pembanding

Operator	Operasi	Contoh
==	Sama	\$a == \$b
===	Identik	\$a === \$b
!=	Tidak sama	\$a != \$b
!==	Tidak identik	\$a !== \$b
<	Lebih kecil	\$a < \$b
>	Lebih besar	\$a > \$b
<=	Lebih kecil atau sama dengan	\$a <= \$b
>=	Lebih besar atau sama dengan	\$a >= \$b

■ Penambahan/Pengurangan terstruktur

Operator	Operasi
++\$a	Pre Increment
\$a++	Post Increment
--\$a	Pre Decrement
\$a--	Post Decrement

- Logika

Operator	Operasi	Contoh
and &&	Benar, jika keduanya bernilai benar	\$a and \$b \$a && \$b
or 	Benar, jika salah satu bernilai benar	\$a or \$b \$a \$b
xor	Benar, jika salah satu bernilai benar, tapi bernilai salah jika keduanya bernilai benar	\$a xor \$b
!	Benar jika pernyataan salah	!\$a

Statement Kendali

- Pengandaian
 - ☐ If
 - ☐ Switch

- Perulangan
 - ☐ Do
 - ☐ While
 - ☐ For
 - ☐ List & Each
 - ☐ Foreach

■ IF

```
if (expresi) {  
    statement_if;  
} elseif (expresi) {  
    statement_elseif;  
} else {  
    statement_else;  
}
```

```
<?php  
$a=3; $b=1;  
if($a > $b){  
    echo "a lebih besar dari b <br>";  
}  
?>
```

```
<?php  
$a=2; $b=10;  
if($a > $b){  
    echo "a lebih besar dari b";  
}else{  
    echo "b lebih besar dari a";  
}  
?>
```

```
<?php  
$a=1;  
if($a==1){  
    echo "satu";  
}elseif ($a==2){  
    echo "dua";  
}elseif ($a==3){  
    echo "tiga";  
}else {  
    echo "> 3";  
}  
?>
```

■ SWITCH

```
switch(expresi){  
    case kasus1:  
        statement_kasus1;  
        break;  
    case kasus2:  
        statement_kasus2;  
        break;  
    ...  
    default:  
        statement_default;  
        break;  
}
```

```
<?php  
$a=1;  
switch($a){  
    case 1:  
        echo "satu";  
        break;  
    case 2:  
        echo "dua";  
        break;  
    case 3:  
        echo "tiga";  
        break;  
    default:  
        echo "> 3";  
        break;  
}  
?>
```

■ DO

```
do{  
    statement_do;  
    ...  
}while(expresi);
```

```
<?php  
    $i=1;  
    do{  
        echo "$i<br>";  
        $i++;  
    } while($i<=10);  
?>
```

```
<?php  
    $i=1;  
    do{  
        echo "$i<br>";  
        $i++;  
    } while($i<1);  
?>
```

■ WHILE

```
while (expresi) {  
    statement_while;  
    ...  
}
```

```
<?php  
    $i=1;  
    while($i<=10){  
        echo "$i<br>";  
        $i++;  
    }  
?>
```

```
<?php  
    $i=1;  
    while($i<1){  
        echo "$i<br>";  
        $i++;  
    }  
?>
```

■ FOR

```
for (nilai_awal, nilai_akhir, perhitungan_aritmatik) {  
    statement_for;  
    ...  
}
```

```
<?php  
    for($i=1; $i<=10; $i++){  
        echo $i."<br>";  
    }  
?>
```

■ LIST & EACH

`list([index_value] [, element_contents]) = each(arrayname);`

```
<?php
$fak=array("FTI","FE","FISIP",
"FT","ASTRI");

while(list($index,$isi)=each($fak)){
    echo "$index $isi<br>";
}
?>
```

```
<?php
$fak=array("FTI","FE","FISIP",
"FT","ASTRI");

while(list($index)=each($fak)){
    echo "$index<br>";
}
?>
```

```
<?php
$fak=array("FTI","FE","FISIP",
"FT","ASTRI");

while(list(,$isi)=each($fak)){
    echo "$isi<br>";
}
?>
```

■ FOREACH

```
foreach ($arrayname as [$index =>] $arrayitem) {  
    statement_foreach;  
}
```

```
<?php  
$fak=array("FTI","FE","FISIP","FT","ASTRI");  
  
foreach($fak as $namafakultas){  
    echo "$namafakultas<br>";  
}  
  
$fak=array("FTI"=>"Fakultas Teknologi Informasi","FE"=>"Fakultas Ekonomi",  
           "FISIP"=>"Fakultas Ilmu Sosial dan Ilmu Politik",  
           "FT"=>"Fakultas Teknik","ASTRI"=>"Akademi Sekretari");  
foreach($fak as $index => $namafakultas){  
    echo "$index $namafakultas<br>";  
}  
?>
```

Penyisipan File

- `require(file_name)`
- `require_once(file_name)`
- `include(file_name)`

```
<?php
//incl1.php
$x=10;
?>
```

```
<?php
//inc2.php
include "incl1.php";
$y=$x+5;
echo $y;
?>
```

```
<?php
require "inc3.php";
$y=$xx+5;
echo $y;
?>
```

```
<?php
include "inc3.php";
$y=$xx+5;
echo $y;
?>
```

Include akan menghasilkan Warning, sedangkan require akan menghasilkan Fatal Error

Function

```
function nm_fungsi (parameter1, parameter2, ...){  
    statement_fungsi;  
    ...  
    return $nilai_return;  
}
```

Jenis Fungsi pada PHP

- Function passing by value
- Function passing by reference
- Function passing by default

- Function passing by value

```
function nm_fungsi (parameter1, parameter2, ...){  
    statement_fungsi;  
    ...  
    return $nilai_return;  
}
```

fvalue.php

```
<?php  
    function hitung($harga){  
        return $harga=$harga-(0.1*$harga);  
    }  
    $harga=5000;  
    echo (hitung($harga));  
    echo "<br>";  
    echo $harga;  
?>
```

- Function passing by reference

```
function nm_fungsi (&parameter1, &parameter2, ...){  
    statement_fungsi;  
    ...  
    return $nilai_return;  
}
```

fref.php

```
<?php  
    function hitung(&$harga){  
        return $harga=$harga-(0.1*$harga);  
    }  
    $harga=5000;  
    echo (hitung($harga));  
    echo "<br>";  
    echo $harga;  
?>
```

- Function passing by default

```
function nm_fungsi (parameter1=nilai1, parameter2=nilai2, ...){  
    statement_fungsi;  
    ...  
    return $nilai_return;  
}
```

fdef.php

```
<?php  
    function hitung($harga=1000){  
        return $harga=$harga-(0.1*$harga);  
    }  
    echo (hitung());  
    echo "<br>";  
    echo (hitung(3000));  
?>
```

Perintah – perintah Query MySQL

- ☐ show databases; #menampilkan database yg sudah ada
- ☐ use nm_dbase; #mengaktifkan database nm_dbase
- ☐ show tables; #menampilkan tabel dari database
- ☐ desc nm_tabel; #menampilkan struktur tabel
- ☐ flush privileges; #me-refresh options MySQL
- ☐ exit; #keluar dari konsole MySQL

SQL (Structured Query Language)

- DDL (Data Definition Language)
 - ☐ Untuk mengatur hubungan database dan struktur tabel
- DML (Data Manipulation Language)
 - ☐ Untuk mendapatkan data/record dari tabel – tabel yang ada.

- DDL (Data Definition Language)

- CREATE

CREATE DATABASE [IF NOT EXISTS] db_name

CREATE [TEMPORARY] TABLE [IF NOT EXISTS] tbl_name
[(create_definition,...)]
[table_options] [select_statement]

```
mysql>create database perpustakaan;
```

```
mysql>show databases;
```

```
+-----+  
| Database |  
+-----+  
| mysql    |  
| perpustakaan |  
| test     |  
+-----+
```

```
3 rows in set (0.02 sec)
```

```
mysql>use perpustakaan;
```

```
mysql> CREATE TABLE `anggota` (  
  `no_ang` tinyint(3) unsigned NOT NULL,  
  `nm_ang` varchar(50),  
  PRIMARY KEY (`no_ang`)  
) TYPE=MyISAM;
```

```
mysql> CREATE TABLE `buku` (  
  `kd_bk` tinyint(3) unsigned NOT NULL,  
  `nm_bk` varchar(50),  
  PRIMARY KEY (`kd_bk`)  
) TYPE=MyISAM;
```

```
mysql> CREATE TABLE `trans` (  
  `no_ang` tinyint(3) unsigned NOT NULL default '0',  
  `kd_bk` tinyint(3) unsigned NOT NULL default '0',

mysql> DELETE FROM anggota
```

HTML, PHP & MySQL

Konektivitas HTML, PHP dan MySQL

- Fungsi - fungsi koneksi PHP dan MySQL:
 - `mysql_connect();`
Melakukan koneksi dengan MySQL
 - `mysql_close();`
Menutup koneksi dengan MySQL
 - `mysql_select_db();`
Memilih database
 - `mysql_query();`
Menjalankan perintah query SQL
 - `mysql_num_rows();`
Mendapatkan jumlah baris hasil perintah query SQL
 - `mysql_fetch_row();`
Mengambil hasil query dalam bentuk index field
 - `mysql_fetch_array();`
Mengambil hasil query dalam bentuk array nama field

Menampilkan data

view.php

```
<html>
<head>
  <title>Menampilkan Data</title>
</head>
<body>
<?php
  $db = mysql_connect("localhost", "tah", "tah_pass");
  mysql_select_db("perpus");
  $result = mysql_query("SELECT * FROM anggota");
  echo "<table border='1'>";
  echo "<tr><td>No.Anggota</td><td>Nama Anggota</td></tr>";
  while($baris=mysql_fetch_row($result)){
    echo "<tr><td>$baris[0]</td><td>$baris[1]</td></tr>";
  }
  echo "</table>";
?>
</body>
</html>
```

Meng-input data

input_data.htm

```
<html>
  <head>
    <title>Input Data</title>
  </head>
  <body>
    <form method="post" action="input.php">
      No.Anggota:<input type="Text" name="vno_angg"><br>
      Nama:<input type="Text" name="vnm_angg"><br>
      <input type="Submit" name="btninput" value="Enter information">
    </form>
  </body>
</html>
```

Meng-input data

input.php

```
<?php
if(isset($_REQUEST['btninput']) && $_REQUEST['btninput']=="Enter information"){
$id=mysql_connect("localhost","tah","tah_pass");
mysql_select_db("perpus");
$vno_angg=$_REQUEST['vno_angg'];
$vnm_angg=$_REQUEST['vnm_angg'];
$query="insert into anggota values ('$vno_angg', '$vnm_angg')";
$result=mysql_query($query);
    if($result)
        echo "Data anda sudah masuk kedalam database";
    else
        echo "Data anda tidak dapat masuk kedalam database";
}
?>
```

Meng-update data

edit.php

```
<html>
  <head>
    <title>Edit Data</title>
  </head>
<body>
<?php
$db = mysql_connect("localhost", "tah", "tah_pass");
mysql_select_db("perpus");
$result = mysql_query("SELECT * FROM anggota");
echo "<table border='1'>";
echo "<tr><td>No.Anggota</td><td>Nama Anggota</td></tr>";
while($baris=mysql_fetch_row($result)){
    echo "<tr><td>$baris[0]</td><td>$baris[1]</td>
        <td><a href='ubah.php?var=$baris[0]'>Edit</a> |
        <a href='hapus.php?var=$baris[0]'>Hapus</a>
        </tr>";
}
echo "</table>";
?>
</body>
</html>
```

Meng-update data

ubah.php

```
<?php
$id=mysql_connect("localhost","tah","tah_pass");
mysql_select_db("perpus");
$var=$_REQUEST['var'];
$query="select * from anggota where no_ang='$var'";
$result=mysql_query($query);
while($baris=mysql_fetch_row($result)){
    echo "<form method='post' action='update.php'>";
    echo "No.Anggota : <input readonly type='text' name='vno_ang' value='$baris[0]'>
    <br>";
    echo "Nama Anggota: <input type='text' name='vnm_ang' value='$baris[1]'><br>";
    echo "<input type='submit' value='Simpan'> <input type='reset' value='Batal'>";
    echo "</form>";
}
?>
```

Meng-update data

update.php

```
<?php
$id=mysql_connect("localhost","tah","tah_pass");
mysql_select_db("perpus");
$vno_ang=$_REQUEST['vno_ang'];
$vnm_ang=$_REQUEST['vnm_ang'];
$query="update anggota set no_ang='$vno_ang', nm_ang='$vnm_ang'
      where no_ang='$vno_ang'";
$result=mysql_query($query);
if($result)
    echo "Data sudah diupdate";
else
    echo "Data tidak dapat diupdate";

echo "<br><a href='edit.php'>Halaman Edit</a>";
?>
```

Meng-update data

hapus.php

```
<?php
$id=mysql_connect("localhost","tah","tah_pass");
mysql_select_db("perpus");
$var=$_REQUEST['var'];
$query="delete from anggota where no_ang='$var'";
$result=mysql_query($query);
if($result)
    echo "Data sudah dihapus";
else
    echo "Data tidak dapat dihapus";

echo "<br><a href='edit.php'>Halaman Edit</a>";
?>
```
